MEMORANDUM FOR THE OSA/AMS RECORD, Info copies - as indicated.

SUBJECT: Results of Preliminary Review of OSA Aeromedical Records Available for Validation Study

1. In order to determine the potential value to be derived from a detailed examination of aeromedical data contained in past and present OSA records, an extensive search of the active and repository files has been made. This action was taken in order to provide a logical and sound basis for reaching a decision in concert with ORD Life Sciences and OMS-AE&S Staffs on the proposal to validate aeromedical and psychological aircrew selection criteria.

2. The writer has uncovered a considerable amount of material in the records (See Enclosure) and has made a personal evaluation of its potential value in providing a useful end-product from its statistical analysis. Admittedly having no expertise in the field of bio statistics, the writer nonetheless feels strongly that the data at hand could not be treated in any manner as to yield any valid correlations. However, a meeting has been set up in [Redacted] conference room for 1330, 6 Jan 69, for the purpose of reviewing and evaluating said records. Meanwhile, the writer does feel that the aeromedical and operational records at hand could and should be extracted and summarized into a narrative, historical document which could have valuable reference to future selection and evaluation activities. The principal question to be raised in making a decision on such a project would be its ultimate worth in relation to the effort and/or costs involved.
